

“Camera in a Bag” Instructions

TCTC IT is providing a high definition CODi 1080P webcam, compatible tripod, 10 foot USB extension cord, and a Samson wireless lavalier microphone to aid faculty in live streaming and recording. The webcam and lavalier microphone are both plug-and-play.

Try It Out

- 1.) Unbox the camera and plug in the USB connection cord into the back of the camera unit.
- 2.) Attach the tripod to the camera unit by screwing the tripod into the brass mount on the bottom of the camera unit.
- 3.) If needed, connect the USB cable to the 10 foot USB extension cable.
- 4.) Connect the USB cable to an available USB port on your computer.
- 5.) Insert the Samson lavalier microphone USB receiver in an available USB port on your computer. A separate TCTC Technology Tip Sheet provides detailed instructions for microphone use.

Note: If your computer has a built-in camera, you are able to switch cameras in your computer settings. You may also have to select the webcam once in your recording application of choice. Ex: Blackboard Collaborate, Microsoft Teams, Zoom, etc.

As always, if you have questions or need technical assistance, contact the Service Desk via phone at 864-646-1779, or by emailing ServiceDesk@tctc.edu
